There are a lot of things that you can do with a good camera such as taking good photographs, recording great moments and a whole lot more. However, you need to find the camera that you are going to buy for this to happen. Since there are a lot of good cameras in the market, it can be quite hard to pick the one that would fit you the most, depending on what you are going to use it for. Therefore, it is important to get to know more about the camera that you are planning to buy. In line with this, the Fujifilm X100V is one of the best choices that you can make and that is why a lot of people are invested in it. Thus, it would be wonderful if you can check it out yourself. This book will be all about the Fujifilm X100V, its specification, and features so that you can get to know it more and be able to decide if it is going to be the one for you.

In 1938, Vienna lost its best and most creative minds. This rupture was manifested in all of the arts and sciences and its mark is felt to this day - not least in the field of furniture design. With inexhaustible creativity the Jewish furniture designers who were forced to flee Vienna continued to work while in exile. They taught at the best universities and spread their ideas and vision throughout the entire world. Their creations became classics of twentieth-century furniture design, the epitome of mid-century modern style. This book honors the memory of the exiled designers with a thorough overview of their work. It details their life stories and their visionary designs, which remain as rele-

vant and contemporary as ever, and brings to light new aspects of the history of Viennese furniture design.

Presents an introduction to the features of the Canon EOS 5D Mark III, covering such topics as exposure, autofocus, Live View, menu operations, lenses, lighting, flash photography, and editing images A complete introduction to shooting, processing and rendering time-lapse movies with a DSLR camera. In *The Art of Astrophotography*, astronomer and Popular Astronomy columnist Ian Morison provides the essential foundations of how to produce beautiful astronomical images. Every type of astroimaging is covered, from images of the Moon and planets, to the constellations, star clusters and nebulae within our Milky Way Galaxy and the faint light of distant galaxies. He achieves this through a series of worked examples and short project walk-throughs, detailing the equipment needed — starting with just a DSLR (digital single lens reflex) camera and tripod, and increasing in complexity as the book progresses — followed by the way to best capture the images and then how, step by step, these may be processed and enhanced to provide results that can rival those seen in astronomical magazines

and books. Whether you are just getting into astrophotography or are already deeply involved, Morrison's advice will help you capture and create enticing astronomical images.
