Fast facts: Global water crisis 844 million people lack basic drinking water access, more than 1 of every 10 people on the planet. Women and girls spend an estimated 200 million hours hauling water every day. The average woman in rural Africa walks 6 kilometers every day to haul 40 pounds of water.

Water scarcity: problems and solutions - We Build Value

Introduction to global water scarcity | Eschooltoday

It is far too easy to view scarcity and poor quality of water as issues solely affecting emerging economies. While the images of women and children fetching water in Africa and a lack of access to water in India are deeply disturbing, this is not the complete picture. The city of Flint, Michigan, where dangerous levels of pollutants contaminated the municipal water supply, is a case in point - as is, more recently, the city of Newark, New Jersey. The physical evidence of water scarcity can be found in increasing

magnitude around the world, affecting rich and poor countries alike. Nearly three billion people live in water scarce conditions (over 40 percent of the world's population), and this situation could worsen if current growth trends continue.

Growing incomes also exacerbate the water problem, because of the water-intensive products—like meat and energy from fossil fuels—that richer populations demand. 3) Groundwater Is Being Depleted. About 30 percent of Earth's fresh water lies deep underground in aquifers.

If global temperatures continue to rise, rainfall will increasingly become a beast of extremes: long dry spells here, dangerous floods there – and in some places, intense water shortages. As early as 2025, the World Health Organization estimates that half of the world's population will be living in water-stressed areas.

Less than 3% of the water on earth is freshwater, and the bulk of this is trapped in snowfields and glaciers and not easily accessible. The rest form the seas and oceans and cannot be used in the same way as freshwater. Only a tiny fraction (0.014%) is surface water in the form of rivers, lakes, and swamps.

"Water scarcity is among the main problems to be faced by many societies and the World in the XXIst century. Water use has been growing at more than twice the rate of population increase in the last century, and, although there is no global water scarcity as such, an increasing number of regions are chronically short of water."

As a result, some 1.1 billion people worldwide lack access to water, and a total of 2.7 billion find water scarce for at least one month of the year. Inadequate sanitation is also a problem for 2.4 billion people—they are exposed to diseases, such as cholera and typhoid fever, and other water-borne illnesses.
