At present, the human scientific community believes that the laws of physics are universal. That is, we believe that the laws of physics are the same here in our Milky way, in Andromeda and in all other galaxies. This belief is based on our observations and understanding of the Universe.

Like more than two-thirds of the known galaxies, the Milky Way has a spiral shape. At the center of the spiral, a lot of energy and, occasionally, vivid flares. are being generated. Based on the immense gravity that would be required explain the movement of stars and the energy expelled, the astronomers conclude that at the center of the Milky Way is a supermassive black hole.

The lifetime contributions of pioneers of galaxy scaling relations, as well as architects of dark matter models and instrumentation mavericks as they pertain to these relations, galaxy formation and the search for dark matter, will be celebrated throughout the Conference.
