On the 1998-2005 Carreras, the engine air-oil separator is located at the top left rear corner of the engine. For the 2006-2008 Carreras, Porsche redesigned the system and moved the AOS to the top of the engine under the right side intake. When the separator fails, you will begin to see a large increase in the overall vacuum in the engine ...

In 2005, Porsche went from the 996 generation of the 911 to the 997 generation. Now while they did carry over the M96 power plant for the base Carrera, they actually offered a newer, redesigned version of the M96 engine in the Carrera S called the M97. The biggest change for this engine was the bump in displacement to 3.8L which was accomplished by increasing the bore size and fitting bigger ...

Like all air cooled Porsche motors the 993 use of vacuum is very important and specific to the vehicle. There is a vacuum distribution fitting at the left rear of the motor that helps to distribute vacuum to several actuators including the Variorom system. This fitting loses its structural integrity over time and fails. It can be very difficult to diagnose as there is no sensor on it. If you ...
