Human reproduction takes place by the coordination of the male

and female reproductive systems. In humans, both males and females have evolved specialized organs and tissues that produce haploid cells, the sperm and the egg. These cells fuse to form a zygote that eventually develops into a growing fetus.

The cell cycle is generally  
divided into two phases:  
interphase and mitosis.  
During interphase, the cell  
spends most of its time  
performing the functions  
that make it  
unique. Mitosis is the  
phase of the cell cycle  
during which the cell  
divides into two daughter  
cells.. Interphase. The  
interphase stage of the  
cell cycle includes three  
distinctive parts: the G 1  
phase, the S phase, and  
the G 2 phase.
