SeaClear has been the favorite of yachtsmen worldwide for the past 15 years. It features all the bells and whistles of major chartplotters and navigation systems at a very low cost, in fact at no cost, as it is free to download and use from www.sping.com. Its major shortcoming has been the limited documentation supplied. SeaClear Unleashed brings you in depth information on using SeaClear in real life navigation situations. The unique tutorial led style written by a yachtman for yachtsmen unleashes the full potential of SeaClear.

The only guide to Southeast Asia that covers the entire length and breadth of a region frequently visited by round-the--

world sailors, many of whom leave Australia to head west. This 2008 edition concentrates on the most frequented routes and includes the most popular stops. There are hundreds of possible anchorages, the most popular of which are usefully summarised in tables. Introductory sections cover planning and the last part of the book deals with more general topics including advice on provisioning and the problems that are often faced by cruisers. Stephen Morgan and Elaine Davies first arrived in the region over 30 years ago. They work in Hong Kong - Stephen Davies as Director of the Hong Kong Maritime Museum and Elaine Morgan as a writer and editor. While this pilot is aimed at yachtsmen and indeed was surveyed from the Davies/Morgan yacht, it is just as relevant to the commercial or military mariner. The part of the world described in this work is one of the most interesting on our planet. Culturally, scenically, climatically and commercially - it has everything. This excellent book - now in its second edition, describes it all very enticingly. Set to the usual high standard of the Imray pilots that precede it, this one is spiced up by the wit and anecdotes the authors are so good at.

Written by two well-known experts in the field with input from a broad network of industry specialists, *The ROV Manual, Second Edition* provides a complete training and reference guide to the use of observation class ROVs for surveying, inspection, and research purposes. This new edition has been thoroughly revised and substantially expanded, with nine new chapters, increased coverage of mid-sized ROVs, and extensive information on subsystems and enabling technologies. Useful tips are included throughout to guide users in gaining the maximum benefit from ROV technology

in deep water applications. Intended for marine and offshore engineers and technicians using ROVs, *The ROV Manual, Second Edition* is also suitable for use by ROV designers and project managers in client companies making use of ROV technology. A complete user guide to observation class ROV (remotely operated vehicle) technology and underwater deployment for industrial, commercial, scientific, and recreational tasks. Substantially expanded, with nine new chapters and a new five-part structure separating information on the industry, the vehicle, payload sensors, and other aspects. Packed with hard-won insights and advice to help you achieve mission results quickly and efficiently.

Stock Assessment: Quantitative Methods and Applications for Small Scale Fisheries is a book about stock assessment as it is practiced. It focuses on applications for small scale or artisanal fisheries in developing countries, however it is not limited in applicability to tropical waters and should also be considered a resource for students of temperate fishery management problems. It incorporates a careful sample design, various mathematical models as a basis for predicting consequences for stock exploitation, and

discusses the impact of exploitation on non-targeted species. This was a unique concept involving a collaborative effort between U.S. and host country scientists to address issues of regional and global concern through innovative research. Unlike other books on stock assessment that show mathematical models, this is the only book of its kind that discusses

how an assessment is carried out. It looks at the field as a whole and includes sampling, age determination and acoustics. The book represents the culmination of a nine-year program financed by the United States Agency for International Development to provide new or improved methods of stock assessment for artisanal fisheries.
